SOB5A-CP3

1-1/16-12 UN • Q_{max} 80 l/min (21 GPM) • p_{max} 350 bar (5100 PSI)

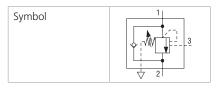

Technical Features

- > The valve prevents runaway ahead of the pump in the event of a negative load
- > Load-holding with leak-free closing poppet when the directional control valve is in neutral position
- > Pressure relief function protecting the actuator against overloading and pressure peaks
- > Integrated check valve acting as an anti-cavitation valve
- > When installed close to actuator the valve can be used as a hose burst valve
- > Back pressure has got negligible effect on relief setting nor the required pilot pressure
- > Setting can be performed during machine operation = leak free closing of adjustable element
- > Wide range of relief pressure setting up to 350 bar (5100 PSI)
- > In the standard version, the valve is zinc-coated for 520 h protection acc. to ISO 9227

Functional Description

Poppet-type, screw-in motion control valve designed to control the runaway of a negative load. The built-in check valve allows reverse flow into the actuator, which is protected by the internal pressure relief function. Back pressure at port 2 has got negligible effect to the pressure relief setting and the required pilot pressure.
